

Wireshark

Wireshark is a widely used, open source network analyzer that can capture and display real-time details of network traffic. It is particularly useful for troubleshooting network issues, analyzing network protocols and ensuring network security.

Networks must be monitored to ensure smooth operations and security. Popular with academic institutions, government agencies, corporations and nonprofits, Wireshark is one such tool that can offer an in-depth view into network activities, diagnose network performance issues or identify potential security threats.

Wireshark seeks to simplify and enhance the process of network traffic analysis. Here are some of its core features:

- Packet capture (PCAP). Converts network traffic into a human-readable format, making it easier to understand and diagnose concerns.
- Real-time analysis. Provides a live view of network traffic, offering immediate insights into ongoing network activities.
- Filtering capabilities. Enables users to focus on specific types of network traffic, making analysis more efficient and targeted.

IIT ROORKEE NMAP SCAN :

The image displays a Wireshark packet capture and a Zenmap Nmap scan results window. The Wireshark interface shows a list of packets, with packet 14 selected, showing details of a TCP segment. The Zenmap window shows the scan results for iitr.ac.in, indicating that the host is up and responding to ping probes.

Wireshark Packet List:

No.	Time	Source	Destination	Protocol	Length	Info

Zenmap Scan Results:

Target: iitd.ac.in
Profile: Regular scan
Command: nmap iitd.ac.in

Starting Nmap 7.95 (<https://nmap.org>) at 2025-02-06 14:28 India Standard Time
Note: Host seems down. If it is really up, but blocking our ping probes, try -Pn
Nmap done: 1 IP address (0 hosts up) scanned in 3.30 seconds

IISC BANGALORE NMAP SCAN :

The image displays two screenshots related to a network scan of IISC Bangalore.

The left screenshot shows a Wireshark packet capture. The filter is set to `ip.addr == 13.71.49.222`. The packet list shows several TCP segments from 13.71.49.222 to 172.16.48.76. The packet details pane shows the selected packet (No. 53) as a TCP Reset (RST) segment with sequence number 551860 and window length 0.

The right screenshot shows the Nmap command prompt and output. The command is `nmap iisc.ac.in`. The output shows the scan results for 13.71.49.222, indicating that the host is up and responding to ping probes.

NIT KURUKSHETRA SCAN :

The image displays two screenshots related to a network scan of NIT Kurukshetra.

The left screenshot shows a Wireshark packet capture. The filter is set to `ip.addr == 14.139.60.10`. The packet list shows several TCP segments from 14.139.60.10 to 172.16.48.76. The packet details pane shows the selected packet (No. 1706) as a TCP Reset (RST) segment with sequence number 54166779 and window length 0.

The right screenshot shows the Nmap command prompt and output. The command is `nmap nitkkr.ac.in`. The output shows the scan results for 14.139.60.10, indicating that the host is up and responding to ping probes.

NIT WARANGAL SCAN :

The image shows a Wireshark packet capture of a ping scan to the IP address 218.248.13.200. The filter bar at the top is set to 'ip.addr == 218.248.13.200'. The packet list shows several TCP segments, including a SYN packet (Seq=195288) and an ACK packet (Seq=3451). The packet details pane shows the 'Command Prompt' window with the command 'ping nitw.ac.in' and its output: 'Request timed out.' and 'Request timed out.' The packet bytes pane shows the raw data of the ping request and response.

NASA SCAN :

The image shows a Wireshark packet capture of a ping scan to the IP address 192.0.66.108. The filter bar at the top is set to 'ip.addr == 192.0.66.108'. The packet list shows several TCP segments, including a SYN packet (Seq=1156) and an ACK packet (Seq=1156). The packet details pane shows the 'Command Prompt' window with the command 'ping nasa.gov' and its output: 'Reply from 192.0.66.108: bytes=32 time=203ms TTL=55' and 'Reply from 192.0.66.108: bytes=32 time=101ms TTL=55'. The packet bytes pane shows the raw data of the ping request and response.

UNBC SCAN :

The image shows a Wireshark network capture of a scan on the IP address 151.101.129.193. The capture shows several ICMP Echo (ping) requests and replies. The Command Prompt window shows the results of a ping command to iitd.ac.in and unbc.ca.

Wireshark Capture Details:

- Filter: ip.addr == 151.101.129.193
- Packet 3289: 74 bytes on wire (592 bits), 74 bytes captured (592 bits) on interface 0
- Ethernet II, Src: Chongqin_7b:87:89 (c0:b5:d7:7b:87:89), Dst: fa:40:ed:4b:59:13
- Internet Protocol Version 4, Src: 192.168.25.215, Dst: 151.101.129.193
- Internet Control Message Protocol

Command Prompt Output:

```

YOUTUBE SCAN :

The image shows a Wireshark network traffic capture of a ping command to youtube.com. The packet list on the left shows several UDP packets from 192.168.48.76 to 142.250.195.14. The packet details pane shows the Ethernet II, Internet Protocol Version 4, and User Datagram Protocol (ping request) layers. The packet bytes pane shows the raw data of the ping request. The packet capture pane shows the raw data of the ping request. The packet capture pane shows the raw data of the ping request.

AIIMS RISHIKESH SCAN :

The image shows a Wireshark network traffic capture of a ping command to aiimsrishikesh.edu.in. The packet list on the left shows several TCP packets from 208.91.198.166 to 208.91.198.166. The packet details pane shows the Ethernet II, Internet Protocol Version 4, and Transmission Control Protocol (ping request) layers. The packet bytes pane shows the raw data of the ping request. The packet capture pane shows the raw data of the ping request.

IIIT DELHI SCAN :

The image shows a Wireshark packet capture of a ping command to iiit.ac.in. The packet list on the left shows several TCP segments from 172.16.48.76 to 103.27.9.24, including retransmissions. The packet details pane shows the Ethernet II, Internet Protocol Version 4, and Transmission Control Protocol layers. The packet bytes pane shows the raw data of the ping request. The packet capture was taken on interface 0, with the source IP 172.16.48.76 and destination IP 103.27.9.24. The packet number is 6137, and the length is 528 bytes.

No.	Time	Source	Destination	Protocol	Length	Info
